Open Journal of Biomedical Research

Open J Bio Med Res

EDITORIAL

Welcome to the Open Journal of Biomedical Research: A new journal with new value!

Abdurraouf Zaet, *BSc, MSc, PhD*

Lecturer

University of Zawia

Libya

The Open Journal of Biomedical Research (OJBR) is a peer-reviewed open access journal that strives to close the knowledge gap across different domains of biomedical science and those that are connected. The founders felt the need to start a new journal that fosters networking among biomedical research researchers and provides a platform specifically for all biomedical research publications due to the fact that the number of biomedical research articles has rapidly increased in the last ten years in various biomedical journals generally. The primary focus of this journal is the publication of original research and studies in the field of biomedicine. It wants to be the top publication for biomedical research. It aims to include all biomedical diagnostic, clinical, and technical management facets.

OJBR is accessible to everyone and unrestricted. We have made the OJBR open in keeping with the current global trend toward more openness and transparency in the production and sharing of scientific knowledge. In an effort to promote "the worldwide electronic distribution of peer-reviewed journal content and access to it fully free and unrestricted by all researcher, educators, students, and other inquiring minds," the 2002 Budapest Declaration sought to launch the open access movement. Many studies have shown the advantages of open access, such as the quicker posting of search results and the higher number of citations open access articles can receive in comparison to those behind a barrier. OJBR includes PDF documentation with each of its articles.

Finally, we encourage all researchers in our field to visit the OJBR website and educate themselves with its guidelines, and think about submitting their work to one of the journal's four categories. In 2022, the processing fees for articles that have been submitted and accepted will be waived in appreciation of the OJBR's debut. In order to improve communication among biomedical research researchers, as was already indicated, OJBR has established a mailing list where members of the community can post various news and updates. For the whole list, announcements and updates are open to everyone. To prevent spam, the list will be moderated (eg, submission spam calls and fraudulent conference ads). We've made an effort to include all relevant researchers in this work. We anticipate that this will serve as a tool to strengthen bonds amongst our community and assure their mutual benefit.
